# SG01D-BC18ISO90

UVB+UVC SiC based UV photodiode A = 0.50 mm<sup>2</sup>

1/4

#### **GENERAL FEATURES**

#### Properties of the SG01D-BC18ISO90 UV photodiode

- UVB+UVC sensitivity, PTB reported high chip stability
- Active Area A = 0.50 mm<sup>2</sup>
- TO18 hermetically sealed metal housing, two isolated pins, one additional grounded pin
- 10  $\mu$ W/cm<sup>2</sup> peak radiation results a current of approx. 8 nA

#### About the sglux SiC UV photodiodes

SiC provides the unique property of extreme radiation hardness, near-perfect visible blindness, low dark current, high speed and low noise. These features make SiC the best available material for visible blind semiconductor UV detectors. By standard our SiC detectors can be permanently operated at up to 170°C. A 350°C version is available. The temperature coefficient is also low, < 0.1%/K. Because of the low noise (dark current in the fA range), very low UV irradiance can be measured reliably. Please note that this device needs an appropriate signal transducer (see typical circuit on page 3). The photodiodes are available with seven different active chip areas from 0.06 mm<sup>2</sup> up to 36 mm<sup>2</sup>. Standard version is broadband UVA-UVB-UVC. Four filtered versions lead to a tighter sensitivity range. All photodiodes have a hermetically sealed metal housing (TO type), either a 5.5 mm diameter (TO18) or 9.2 mm (TO5) Further option is either a 2 pin header (1 isolated, 1 grounded) or a 3 pin header (2 isolated, 1 grounded) as well as the SG03 series for vacuum UV measurement below 200 nm or the 6H series for enhanced UVA sensitivity range, SMD packaged photodiodes, and photodiodes with circular active are for a more homogenous field of view.

## FIELD OF VIEW

## **TYPICAL CIRCUIT**

#### Measurement Setup:

lamp aperture diameter: 10 mm distance lamp aperture to second aperture: 17 mm second aperture diameter: 10 mm distance second aperture to detector: 93 mm

pivot level = top surface of the photodiode window

Calculations and Limits:

 $U_a = \ I_p x \ R_f = \ o \ ... \ \sim \ V_{cc}$ 

U<sub>a,max</sub> depends on load and amplifier type

 $\begin{array}{l} R_{f} = \mbox{10} k\Omega \ ... \ \sim \ \mbox{10} G\Omega, \ C_{f} \geq \mbox{3pF} \\ \mbox{Recommendation:} \ R_{f} x \ C_{f} \geq \mbox{10}^{-3} s \\ I_{p,max} = U_{a,max} \ \div \ R_{f} \end{array}$ 

Bandwidth = DC ...

$$\frac{1}{2\pi \ x \ R_f x \ C_f}$$

Example:  $I_p$ = 20nA,  $R_f$ =100M $\Omega$ ,  $C_f$ =100 pF  $U_a$ = 20 x 10<sup>9</sup>A x 100 x 10<sup>6</sup> $\Omega$  = 2V

# 4/4

#### APPLICATION NOTE FOR PHOTODIODES

For correct reading of the photodiode the current (and NOT the voltage) must be analyzed. This requires a short circuiting of the photodiode. Usual approaches are using a **Picoamperemeter** or a **transimpedance signal transducer** circuit as shown on page 3.

## UPGRADE TO A TOCON OR A PROBE

- **TOCONs = UV sensors with integrated signal transducer**
- SiC based UV hybrid detector with signal transducer (0–5V output), no additional amplifier needed, direct connection to controller, voltmeter, etc.
- Measures irradiance from 1.8 pW/cm<sup>2</sup> up to 18 W/cm<sup>2</sup>
- UV broadband, UVA, UVB, UVC or Erythema measurements

#### Miniature housing with M12x1 thread for the TOCON series

- Optional feature for all TOCON detectors
- Robust stainless steel M12x1 thread body, supply voltage 7...24 V
- Integrated sensor connector (Binder 4-Pin plug) with 2m connector cable
- Easy to mount and connect, increased EMC safety

#### UV probes

- Different housings e.g. with cosine response or water pressure proof
- Different electronic outputs configurable (voltage, current loop, USB, Modbus, CAN)
- Good EMC safety for industrial applications

#### CALIBRATION SERVICE

- PTB traceable calibrations and measurements:
- Calibration of sensors for irradiance measurements
- Calibration of UV sensors on discrete wavelengths
- Determination of a specific spectral sensor responsivity
